## CYBERSECURITY RISK

Using the Cyber Scorecard, determine your risk level and review the checklist for the key activities needed to be performed to reduce your risk.

Cyber Scorecard	Yes/Unsure/No
1 I have two-factor authorization set up on my email, banking, and other financial accounts. (Examples of two-factor include a code sent to your phone or email, or a passcode given during a phonecall.)	
2 I understand the dangers of free public WiFi versus secure WiFi.	
3 I understand how to tell if my home WiFi is vulnerable.	
4 I have set up alerts in my financial accounts to notify me when transactions are above my typical spending.	
5 I have locked my credit at all 3 bureaus (Equifax, Experian & TransUnion).	
6 I use secure passwords that are not shared among my accounts. (Note: As of 2021, Microsoft recommends passwords are at least 8 characters in length and are not easily-guessable (password123))	
7 I have an antivirus program running on my computers with auto update turned on.	
8 I have a way to restore my computer in the event of malware/ransomware, and it is up to date.	
9 My software programs are set for auto update including operating systems, Microsoft products, etc.	
10 If applicable, my non-Apple cell phone has an anti-virus installed.	
11 I understand that hackers will try many tactics to get my information including emails with malicious links/files, calling and impersonating a company I know and use, texting my cell phone with malicious links. If I am ever unsure, I call the company's listed phone number to verify first.	
12 I have a local resource that can assist me with fixing my computer in the event of an attack.	
13 I have a document shredder that I use for documents that contain my personally identifiable information.	

For each question, add 5 points for each Yes answer.

Points: 65-55 => LOW RISK	<b>Great Job!</b>
Points: 50-40 => MEDIUM RISK	<b>Review Checklist Items</b>
Points: 35-0 => HIGH RISK	<b>Review Checklist Items</b>
